**HERBACEOUS
PERENNIALS**

1905

**BAY STATE NURSERIES
WINDSOR H. WYMAN
NORTH ABINGTON
MASSACHUSETTS**

Herbaceous Department.

There is an increasing interest in the planting of hardy perennials and each year finds the popularity more firmly established.

Our collection contains over Six Hundred species and varieties, so that one, by making judicious selections, may stock the garden with plants which afford flowers in succession from early Spring until late Fall.

We send out only strong, field-grown plants, which will bloom the first season after planting.

al, swordlike foliage and tall spikes of creamy		
white flowers in June, 6 ft.....	1.00	8.00

YUCCA FILAMENTOSA.

A FEW LEADERS FOR 1905.

HARDY ASTERS. (See page 3.)

(*Michaelmas Daisies.*)

A more beautiful and interesting class of plants cannot be found. The cultivation of them has been too long neglected. Being perfectly hardy, graceful in habit and bearing a profusion of bloom at a season when hardy flowers are scarce, make them invaluable. The twenty-three varieties offered in this list, have been thoroughly tested on our grounds, and found worthy of all that is claimed for them. Lady Trevellyn, Novæ Angleæ and Novæ Belgii, can be furnished this spring. The other varieties are for delivery in the Autumn only.

HOLLYHOCKS. (See page 1.)

(*Althæa rosea.*)

The revival of this old plant is a true indication that popular favor is toward the Herbaceous Garden. We are offering some of the finest strains of this old flower, both double and single varieties.

IRIS. (See page 8.)

(*Fleur-de-lis.*)

The collection of Iris at the Bay State Nurseries is worthy the attention of every lover of this popular flower. For planting in border and rockery, this plant is unsurpassed. The several new species offered by us meet every requirement as to blooming season and adaptation to the different soils in which they may be planted.

PHLOX PANICULATA. (See page 14.)

(*Perennial Phlox.*)

This notable perennial is perhaps the most widely known of all. Of the vast number of varieties tested in our nurseries the past few years, many have been discarded. Only the best known varieties are retained and offered to our patrons. Some of the newer varieties found in our list, must be seen to be appreciated.

PÆONIAS. (See page 12.)

We offer sixty-five varieties of this splendid old plant. Some of the varieties are of enormous size, perfectly double and deliciously fragrant. Pæonias thrive in all locations whether in the broad sunlight or in partial shade. Their freedom from disease and insects make them most desirable.
